**Ms. Gimble**

Then we will all go to the hallway and stand around the large floor grid (insert photo above) we have made on the tiles with colored masking tape. Mr. Clark and I will demonstrate how to locate points on a grid. We will pull coordinate points for latitude and longitude from a bucket and walk on those points until we meet. Then we will gently pull strings of yarn we will have attached to satellites suspended from the ceiling to mark our waypoint. We will model, think aloud, and use the lesson vocabulary frequently.
